

Storing Magnetic Signs

- When not using your flexible magnetic signs, keep it in a clean, dry place.
- Store your rolled magnetic sign on end with the printed or vinyl side out.
- When storing flat, be sure your magnetic sign is on a level surface. Avoid placing objects on top that could damage the face. Do not stack magnetic signs facing each other.

Preparing Magnetic - Receptive Surfaces

- Before affixing your magnetic sign to a metal surface, be sure all surface paints, clear coats are cured (hardened). Approximate curing times are: paint- 90 days, clear coats - 60 days, wax - 2 days.
- Clean the metallic surface and magnet with a mild detergent.
- Wipe with a soft cloth or allow to dry.

Applying Magnetic Signs

- If possible, affix to a smooth, flat or gently curved metallic surface.
- Make sure the entire magnet is flat against the metal surface (i.e. no air pockets).
- If you place the magnet in the wrong position, completely remove the magnet from the surface and re-affix. Do not pull the magnetic sign across the surface as this may result in the sign stretching due resistance caused by the high magnetic strength.
- Avoid using on horizontal metal surfaces exposed to direct sunlight (such as car bonnets) or temperatures exceeding 150°F.
- Be aware that long term use on surfaces frequently exposed to sunlight (such as vehicles) can result in uneven fading of the surface as the covered area is shielded from UV light.
- Avoid use on non-metallic body fillers, simulated wood grain or repainted surfaces.

Cleaning Magnetic Signs

- To guard against moisture and dirt build up between the magnet and the metal surface (particularly on outdoor applications), remove the magnet at regular intervals. Clean both the magnet and the surface with a mild detergent, wipe with a soft cloth or allow to air-dry. For vehicle mounted signs we recommend that these are removed and cleaned WEEKLY.
- To protect fresh clear coat, base coat or vinyl surfaces on vehicles, we recommend that the magnetic sign is removed and cleaned DAILY.

Proper use and care will extend the life of your magnetic sign and protect the metallic surface to which it is applied.
